Project Name: Hospital management system

Introduction:

Purpose: This document specifies the system requirements for the Hospital Management System(HTML) . The system will assist healthcare providers in managing various administrative, clinical, and financial tasks within a hospital, including patient management, appointment scheduling, billing, inventory management, and staff management.

Scope:

The HMS will cover the following main modules:

1.Patient Management 2.Appointment Scheduling 3. Doctor/Staff Management

□

4.Billing and Payment 5.Inventory Management 6.Reports and Analytics **User:**

This document is intended for:

- 1.Developers building the system.
- 2.Stakeholders (Hospital administrators, doctors, staff, and patients).
- 3.System testers and implementers.

Definitions, Acronyms, and Abbreviations

- 1.HMS: Hospital Management System
- 2.EHR: Electronic Health Records
- 3.UI: User Interface

System Overview

The HMS is a web-based system that supports the daily operations of a hospital. It will manage various hospital functions such as patient registration, scheduling, billing, medical records, and staff management. It will provide features like real-time data updates, role-based access control, and reporting.

Functional Requirements

Patient Registration and Management

FR1: The system shall allow patients to register by entering personal information (name, contact details, emergency contact, etc.).

FR2: The system shall allow patients to view and update their profile information.

FR3: The system shall generate a unique patient ID for each registered patient.

FR4: The system shall maintain patient medical history, including diagnoses, treatments, allergies, etc.

Appointment Scheduling

FR5: The system shall allow patients to book appointments with doctors through the system.

FR6: The system shall show available appointment slots for each doctor.

FR7: The system shall allow patients to cancel or reschedule their appointments.

FR8: The system shall send automated appointment reminders to patients via email/SMS

Doctor and Staff Management

FR9: The system shall allow the administrator to add and remove staff members (doctors, nurses, administrative staff).

FR10: The system shall allow role-based access to various features (e.g., doctors can access patient records, nurses can manage patient care schedules).

FR11: The system shall allow the management of doctor schedules and working hours.

Billing and Payment

FR12: The system shall generate invoices for patients based on services rendered.

FR13: The system shall allow patients to pay bills online.

FR14: The system shall track payment status (paid, pending, insurance pending).

FR15: The system shall generate financial reports for the hospital's accounting department.

Inventory Management

FR16: The system shall track inventory levels of medical supplies.

FR17: The system shall notify the administrator when stock levels fall below a certain threshold.

FR18: The system shall manage purchase orders for inventory restocking.

Reporting and Analytics

FR19: The system shall generate reports on patient visits, treatments, and doctor performance.

FR20: The system shall allow custom reports to be generated based on various filters (e.g., date range, department).

Non-Functional Requirements

Performance

NFR1: The system should support at least 200 concurrent users without significant degradation in performance.

NFR2: Response time for any user action should be under 2 seconds.

Security

NFR3: The system shall require user authentication (username and password) for all users.

NFR4: The system shall encrypt sensitive data (e.g., patient records, payment details). **NFR5:** The system shall have role-based access control, restricting access to data based on user roles (e.g., doctors, nurses, administrators).

Usability

NFR6: The system should have an intuitive and user-friendly interface.

NFR7: The system shall be responsive, supporting desktop, tablet, and mobile devices.

Availability

NFR8: The system should be available 24/7, with at least 99.9% uptime.

NFR9: The system should have automatic backup and recovery procedures in case of system failure

NFR10: The system shall be compatible with modern web browsers (Chrome, Firefox, Safari).

External Interface Requirements

User Interfaces

UI1: The system shall have a web-based UI that allows users to access patient information, manage appointments, and view reports.

UI2: The system shall provide a responsive design for mobile and tablet usage.

Hardware Interfaces

HI1: The system shall integrate with medical equipment (e.g., patient monitoring devices) for automatic data collection.

Software Interfaces

SI1: The system shall integrate with an external payment gateway (e.g., PayPal, Stripe) for processing payments.

SI2: The system shall interface with a hospital's existing EHR system for patient record exchange.

System Architecture

The system will use a **client-server** architecture. The client will be a web browser or mobile device that interacts with the server. The server will handle data processing, storage, and business logic. A relational database (e.g., MySQL) will be used to store patient data, medical records, billing information, and staff details.

System Design

Architecture Overview

The system will follow a **Client-Server** architecture.

Frontend: HTML,CSS,Java-Script.

Backend: php

Database: MySQL for storing structured patient data and records.

Authentication: OAuth2.0 or JWT for secure token-based authentication.

Payment Gateway Integration: Stripe, PayPal, or custom solutions for payment processing.

Assumptions and Dependencies

The hospital will have access to the necessary hardware and networking infrastructure. The system will be developed in phases, with initial features like registration and appointment scheduling being prioritized.

Appendices

- A. **Glossary:** Definitions of key terms used in the document.
- B. **References:** References to any documents, standards, or technologies used in the development process.

Project Timeline

Phase	Duration	Start Date	End Date
Requirement Analysis	2 weeks	20/02/2025	20/03/2025
System Design	3 weeks	20/02/2025	20/03/2025
Development	12 weeks	20/02/2025	20/03/2025
Testing & QA	4 weeks	20/03/2025	20/03/2025
Deployment	2 weeks	20/06/2025	20/12/2025

Budget Estimation

Item	Estimated Cost
Software Development	\$120000
Server Hosting (Cloud)	\$30000
Security Measures (SSL, etc.)	\$2000
UI/UX Design	\$5000
Total	\$157000

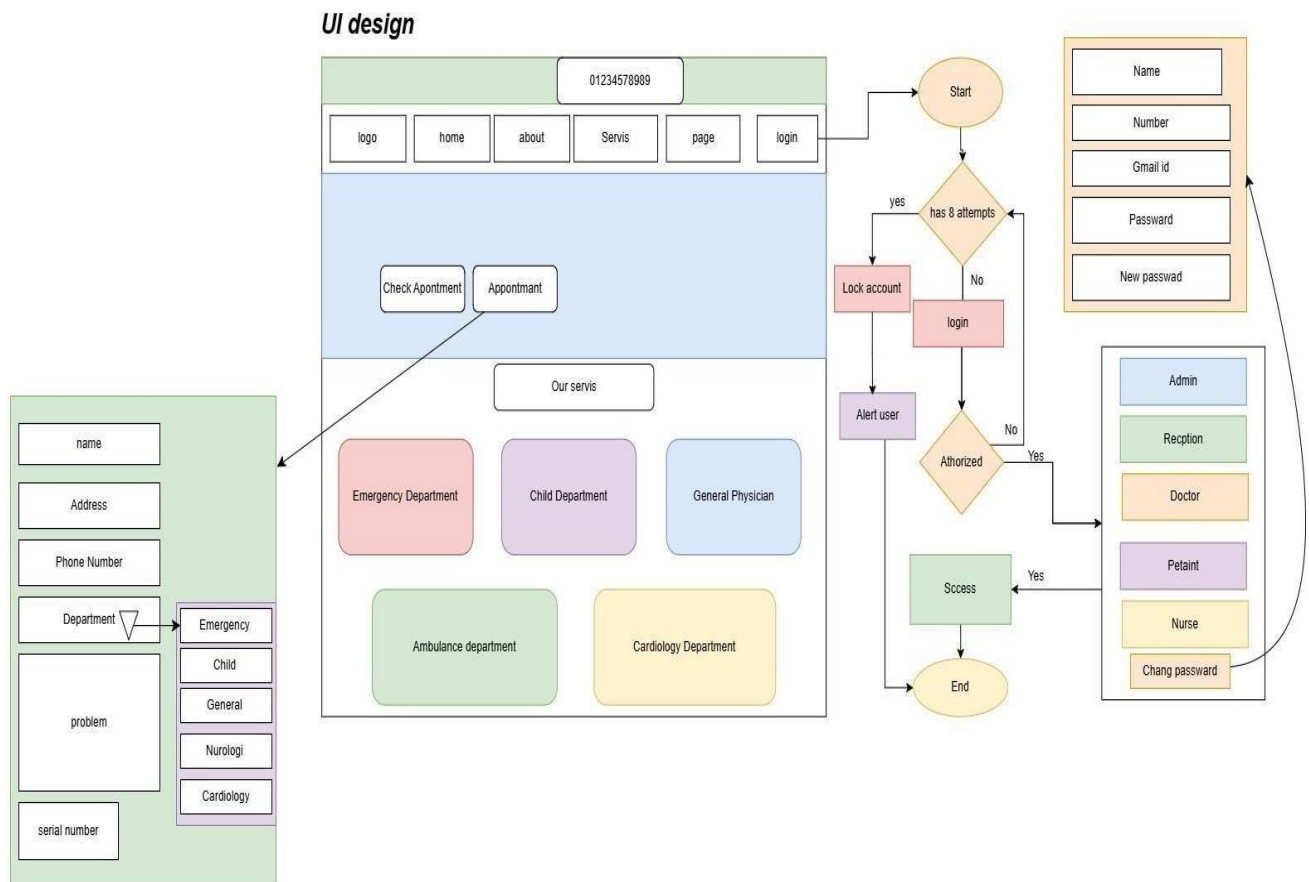

Conclusion

This SRS provides a comprehensive overview of the required functionalities and non-functional specifications for the Hospital Management System. By adhering to these requirements, the development team will create a system that supports hospital operations, enhances patient care, and ensures efficient management.

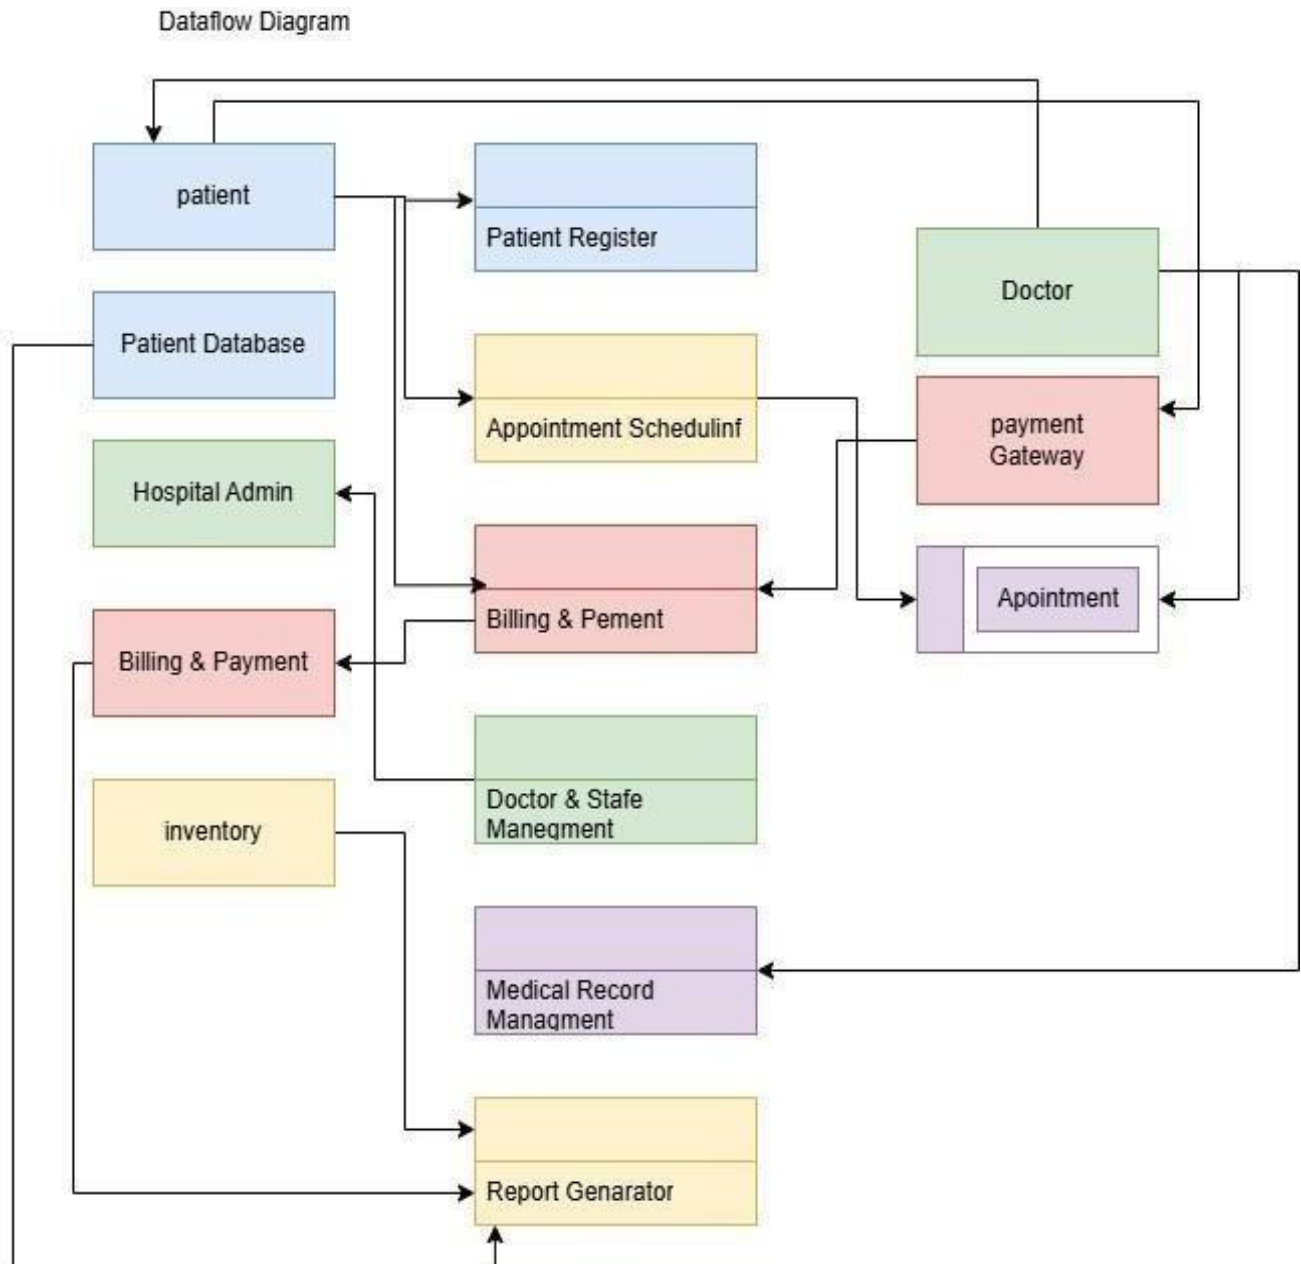

FLOWCHART:

What is the definition of a flowchart?

Ans: A diagram that shows step-by-step progression through a procedure or system especially using connecting lines and a set of conventional symbols.

Data Flow Diagram: A Data Flow Diagram (DFD) is a graphical representation that visualizes the movement of data through a system or process. It uses symbols and notations to show how data is input, processed, stored, and output, without focusing on the specific timing or sequence of processes. DFDs are commonly used in system analysis and design to understand and model information systems .

1. About Us Section

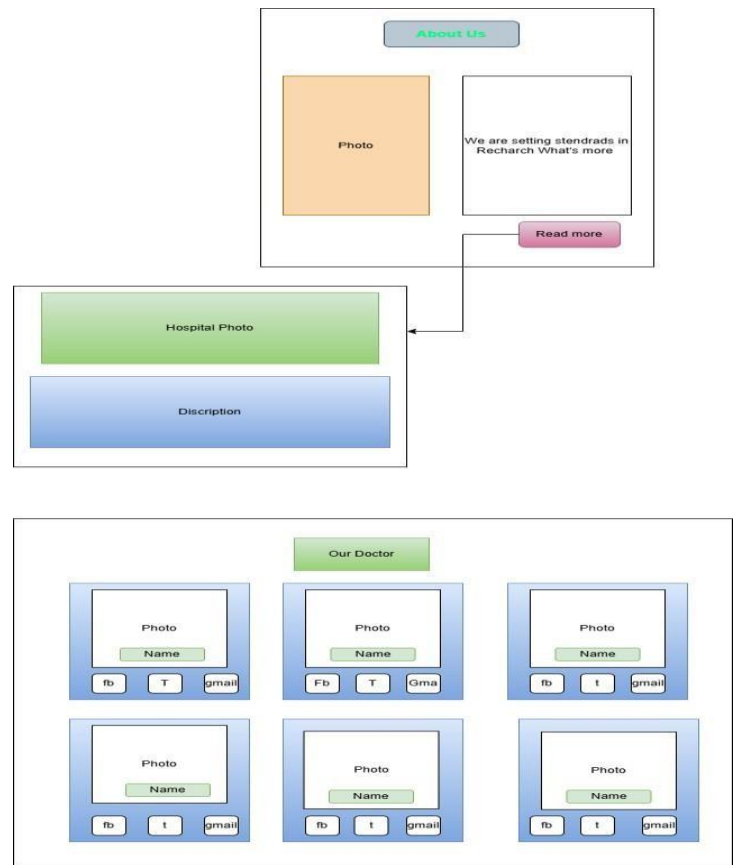

Purpose: To introduce the hospital and provide a brief overview of its mission or values.

Left Side: A placeholder for a Photo, possibly of the hospital or founder. We are setting standrads in Recharch What's more" Right Side: A short paragraph that says:

Right Side: A short paragraph that says: We are setting stendrads in Recharch What's more"

Note: Contains spelling errors – correct form: “We are setting standards in Research. What’s more...”

Button: A “Read more” button that likely links to a full “About Us” page

2. Hospital Overview Section

Description: A text area labeled “Discription” (note: spelling should be corrected to Description), meant to provide brief information about the hospital's services or history.

3. Our Doctors Section

Purpose: To showcase the medical team of the hospital.

Structure:

There are 8 doctor cards arranged in two rows.

Each card includes:

A Photo of the doctor.

The Name of the doctor.

Social Media/Contact Icons at the bottom:

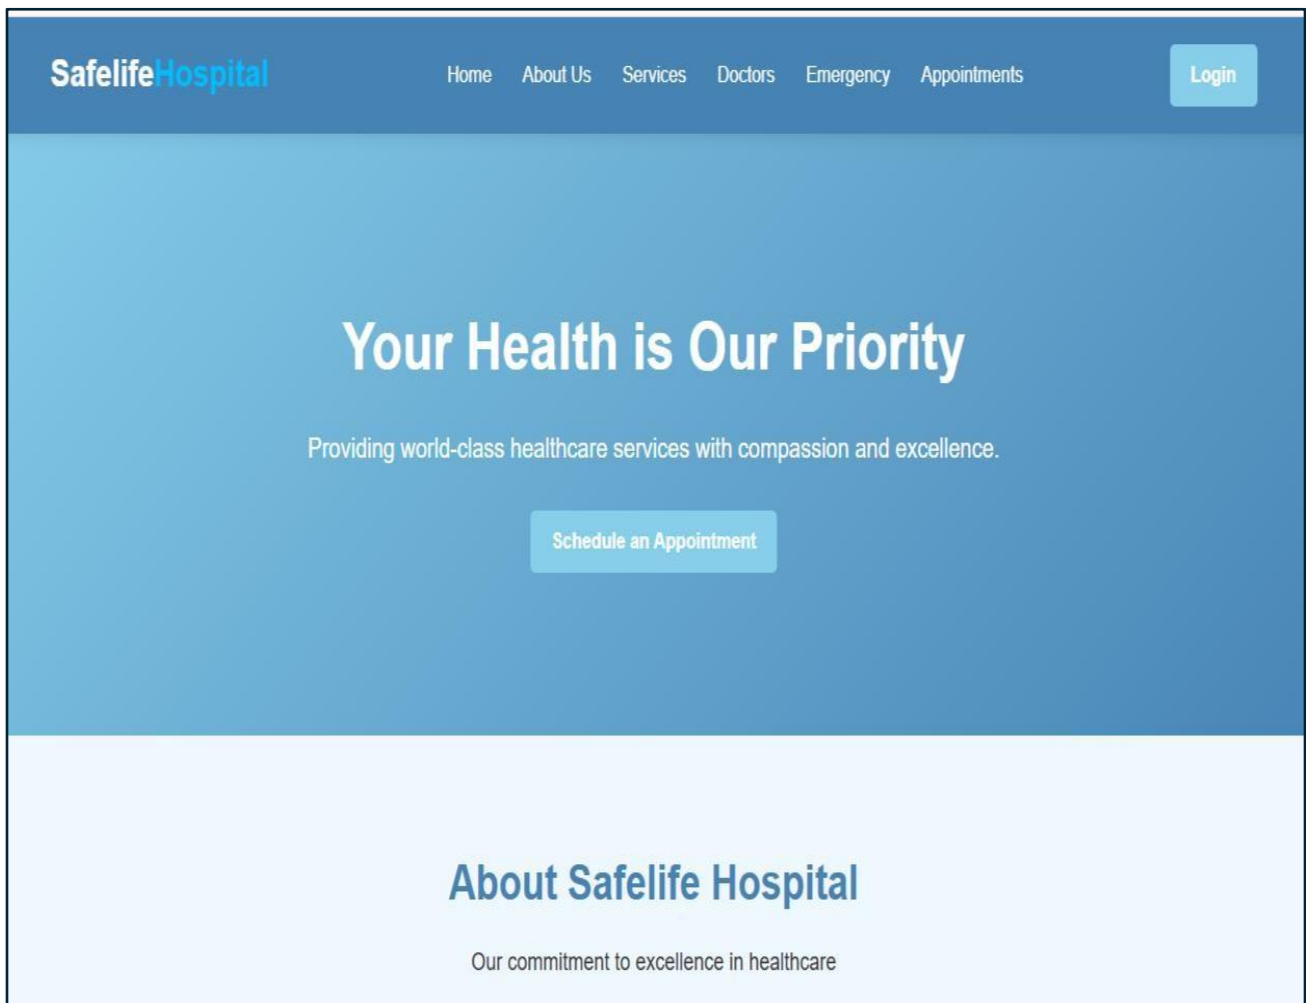

Facebook (fb or Fb)

Twitter (t or T)

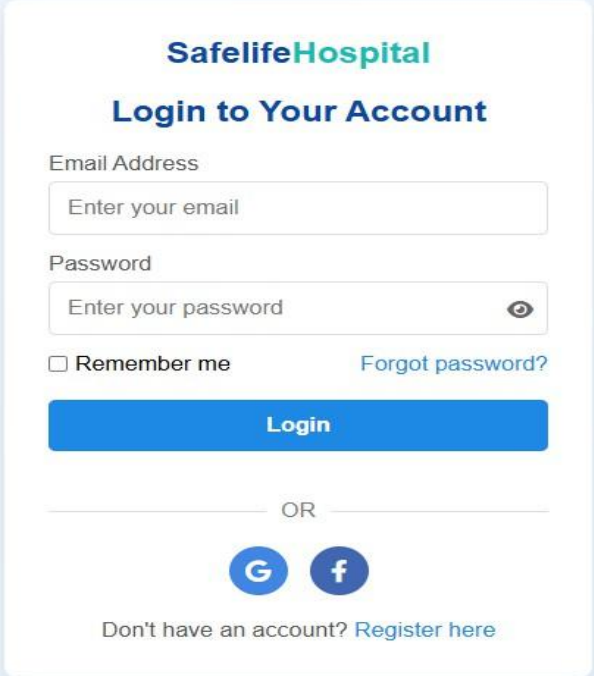

Gmail (gmail or Gma)

Note: The labels and icons should have consistent capitalization for professionalism (e.g., all lowercase or all capitalized).

Hospital Management website some picture:

Login page:

The login form is centered on a light blue background. It features the SafelifeHospital logo at the top, followed by the title 'Login to Your Account'. Below this are two input fields: 'Email Address' with a placeholder 'Enter your email' and 'Password' with a placeholder 'Enter your password' and a toggle icon. A 'Remember me' checkbox and a 'Forgot password?' link are positioned below the password field. A prominent blue 'Login' button is centered below these elements. A horizontal line with the word 'OR' in the middle separates the login section from the social media login options, which include circular icons for Google and Facebook. At the bottom, a link 'Don't have an account? Register here' is provided.

Login Register from:

The image shows a web form for creating an account at SafelifeHospital. The form is titled "SafelifeHospital Create Your Account" and is set against a light blue background with a white central panel. It contains five input fields: "Full Name", "Email Address", "Phone Number", "Password", and "Confirm Password". Each field has a placeholder text. The "Password" field includes a list of requirements: "At least 8 characters", "One uppercase letter", and "One number". There are eye icons for toggling password visibility. A blue "Register" button is at the bottom, followed by a link "Already have an account? Login here".

This is a **user registration page** for **Safelife Hospital**, designed to allow new users (possibly patients or staff) to create an account. The form collects essential information including:

- Full Name
- Email Address
- Phone Number
- Password and Confirm Password

It also includes **password strength requirements** and a **login link** for returning users.

The “**Book an Appointment**” page allows users to schedule medical appointments online by filling in essential personal and appointment-related details. It improves patient convenience, reduces waiting time at hospitals, and streamlines the process for both patients and administrative staff.

Our Services – Safelife Hospital

Safelife Hospital offers a comprehensive range of specialized medical services to meet diverse healthcare needs. The primary departments include:

- **Cardiology:** Advanced heart care using state-of-the-art technology and skilled cardiologists.
- **Neurology:** Focused on treating brain and nervous system disorders with specialized care.
- **Orthopedics:** Complete care for bones, joints, and musculoskeletal issues.
- **Pediatrics:** Gentle and expert care for infants, children, and adolescents.
- **Ophthalmology:** Eye care services from routine checkups to complex surgeries.

About Safelife Hospital

Our commitment to excellence in healthcare

Leading Healthcare Provider Since 1995

Safelife Specialized Hospital has been at the forefront of medical excellence for over 25 years. Founded with the vision to provide accessible, high-quality healthcare to all, we have grown to become one of the most trusted hospitals in the region.

Our Mission

To deliver exceptional patient care through advanced medical technology, highly skilled professionals, and compassionate service. We strive to improve the health and well-being of our community through innovation and excellence in healthcare.

Why Choose Us?

- 300+ bed state-of-the-art facility
- 150+ experienced specialist doctors
- 24/7 emergency services
- Advanced diagnostic and treatment technologies
- Patient-centered care approach

Our Doctor:

Our Specialist Doctors

Meet our team of highly qualified and experienced medical professionals, committed to providing the best patient care:

- **Dr. Ayesha Siddika** – Cardiologist
- **Dr. Nusrat Jahan** – Neurologist
- **Dr. Shafiqul Islam** – Pediatrician
- **Dr. Hassan Mahmud** – Orthopedic Surgeon

Each doctor is available for consultation and is an expert in their respective field, ensuring you receive quality and personalized medical care.

Our Mission

To provide exceptional patient care through advanced medical technology, experienced professionals, and compassionate services. Safelife aims to enhance the well-being of the community through innovation and excellence.

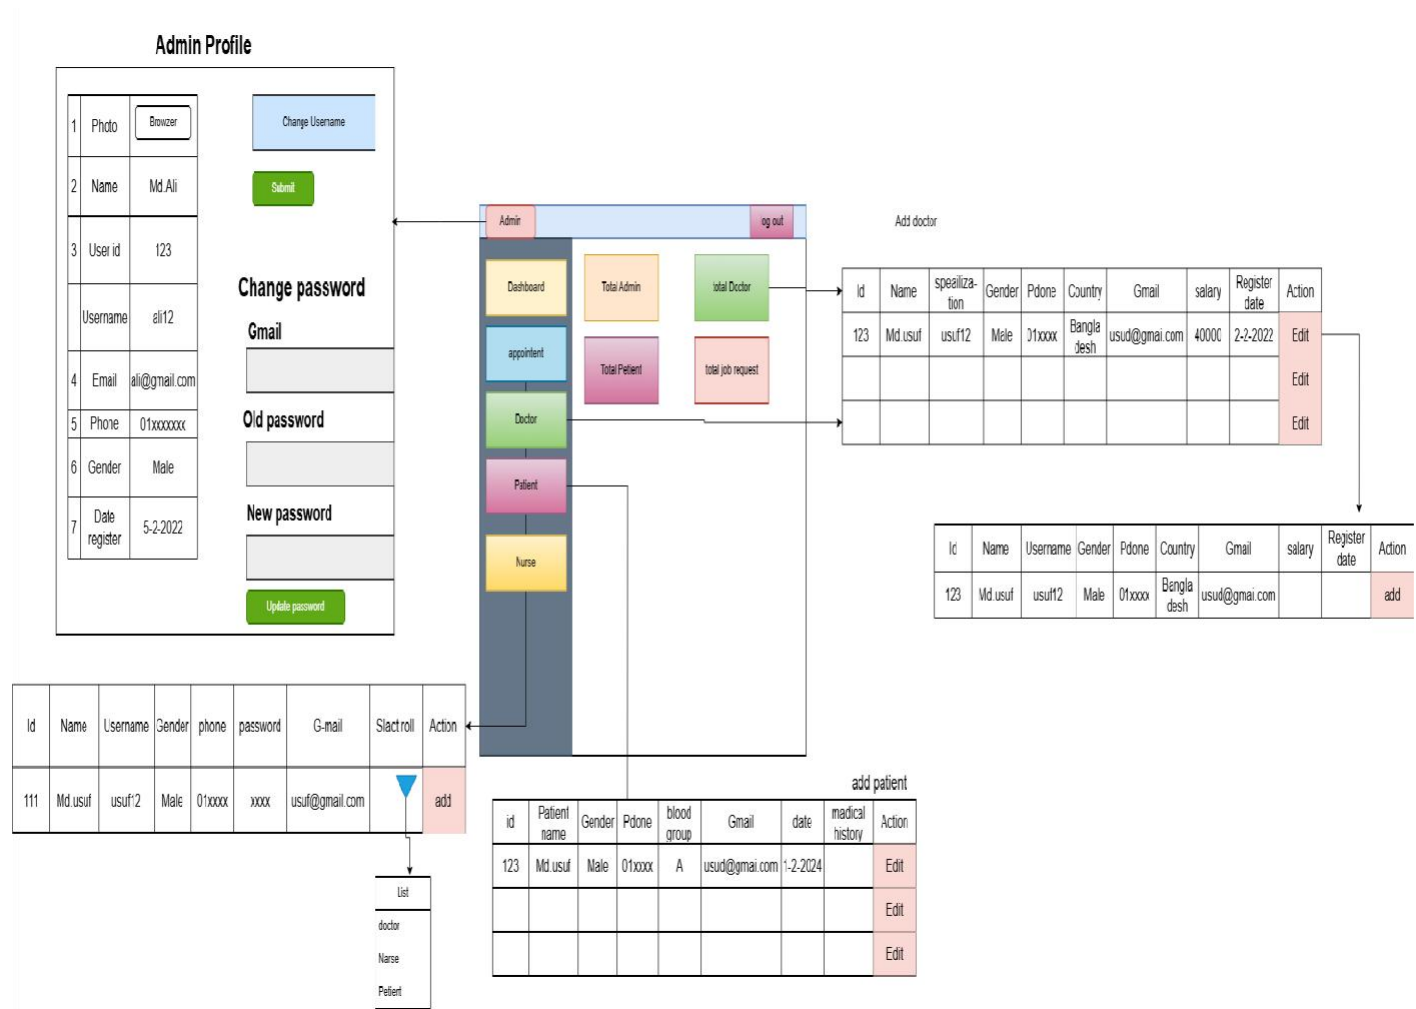

Overall Notes

This wireframe is intended for frontend UI/UX design.

There are a few spelling mistakes that should be corrected for clarity and professionalism.

Once fully developed, this layout will help users learn about the hospital, view facilities, and connect with doctors.

Admin flow diagram:

Safelife Admin Dashboard Overview

The image displays the main dashboard of the Safelife Admin panel, used for managing hospital or clinic operations. The dashboard provides a summary of key statistics:

- Patients:** A total of 1,245 patients are registered, showing a 12% increase from the previous month.
- Doctors:** There are 48 available doctors, with 3 newly added this month.
- Appointments:** 86 appointments are scheduled for the day, with 5 patients currently waiting.
- Rooms:** 32 rooms are available, while 12 are currently occupied.

The left sidebar includes navigation options such as Dashboard, Patients, Doctors, Appointments, Rooms, Pharmacy, Billing, Settings, and Logout. At the top right, the administrator (Dr. John Smith) is logged in. The lower part of the dashboard includes sections for Recent Appointments and Recent Patients, which are currently empty in the image.
